EB METAL US Mill Certification Policy

EB METAL US Mill Certification Policy is to provide Mill Certificates for all steel utilized in the production of EB METAL US stud and track products. Mill Certificates will be provided, free of charge, upon the request of the customer as required for compliance with the construction documents. Mill certifications must be requested at the time of order placement and will be sent with each shipment. This policy does NOT APPLY to accessory items such as flat strap, angles, notched tracks, beads and trim, which are not required to have mill certificates. This also does not apply to “stock” metal stud and track.

Mill Certificates Shall:

1. Be provided by EB METAL US from outside labs that are compliant with ANSI/ISO/IEC Standard 17025 and are certified to perform the required testing.
2. Be formatted in a Certified Test Report (sample attached).
3. Be available for Structural and Non-Structural stud and track framing members only.
4. Be 100% traceable to each stud and track member and will be marked in accordance with ASTM C955 (Structural) and ASTM C645 (Non-Structural). Pieces shorter than 6' may not have ink jetting on each and every piece.
5. The EB METAL US mill certificates shall contain the following information:
 - Heat Number
 - Coil Number
 - Nominal Thickness
 - Galvanized Coating Weight
 - Yield Strength
 - Tensile Strength
 - Elongation %
 - Test Standard A370
 - Certified Technician Signature
